

BUILT-IN BLINDS

NEW Bespoke Sizes Now Available

ODL'S Built-In Blinds provide unprecedented, industry-leading performance, quality and durability. Now available in bespoke sizes, you can offer your customers the best product to meet their needs in a variety of window, door and sunroom applications.

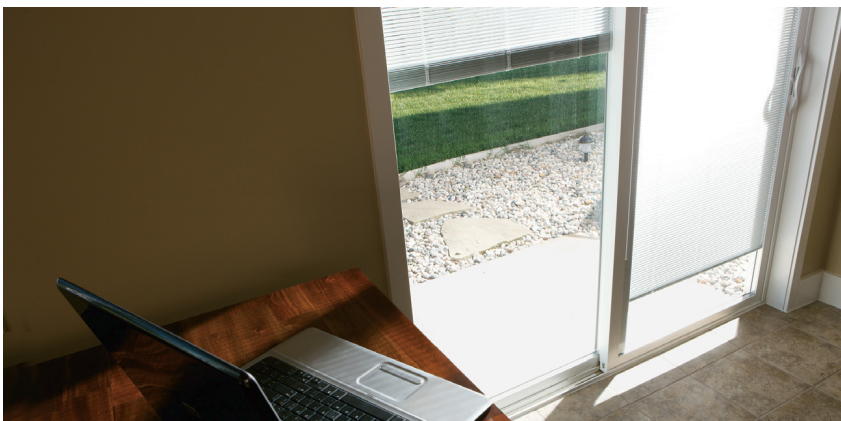

BBG PRODUCT FEATURES

What Consumers Really Want

Research shows that 62% of consumers are dissatisfied with current patio door treatment options (vertical blinds, curtains, rollershades), for their french or bi-fold doors and sunroom windows. ODL understands what consumers really want:

- Safety for children and pets
- Control of privacy, light and heat from the sun
- Easy operation
- No dusting
- A clean, efficient look
- No need for bulky window treatments

Control Light & Privacy

- Visual Privacy – Create a wide open view or enjoy complete privacy
- Natural Light – Open for maximum light or closed to reduce glare and solar heat gain

Convenience & Durability

- No dusting, easy to maintain
- No exposed cords reduce safety risks
- Blinds move in sync with doors and windows, and are never in the way
- Blinds are thermally sealed between two panes of glass

RELIABLE & ENERGY EFFICIENT

Reliability

With over 5 million blinds sold, a quality rate of over 99.5%, and a 10-year warranty, you can be confident choosing ODL.

- Blinds go through a series of reliability tests including:
 - 10,000 raise & lower cycles
 - UV testing
 - Slam testing
 - Ship testing
- We have shipped over 5 million built-in blinds products
- Our products are designed for the wider IG requirements of sliding french, or bi-fold doors and sunroom windows
- Advanced internal mechanisms assure reliability and robust durability
- Efficient force-to-lift ratio is designed for easy operation

Light-Touch® controls easily raise and lower the blinds. Tilt control allows for precise adjustment of the blinds.

Energy Efficient

Provides the thermal performance of insulated glass with the additional benefits of operable integral blinds. Not only do blinds provide control over privacy and natural light, but they also let homeowners control the amount of solar heat that enters the room.
